

Even more enhancements in the latest release of **Bynx** mobility management platform including additional apps

Paving the way for the mobility landscape of the future

Bynx has released v12.8 of its flagship fleet and mobility management platform (also called **Bynx**), which supports a number of important operational, legal and fiscal changes in various markets.

New features include:

- *New vehicle maintenance features for the popular **Bynx Driver App**.*
- *Faster customer counter reservations for **Bynx** rental clients.*
- *The **Bynx** remarketing tool has a new user interface for the traders sales channel.*
- *Customer notifications have been enhanced in the Client Portal.*

Additionally, the UK HMRC is encouraging businesses to “make tax digital” and submit electronic VAT returns, so **Bynx** now fully supports this. All customers using external funders will benefit from enhancements to the **Bynx** Third-Party funding element, which makes capturing funder supplier charges and invoices quicker, more accurate and efficient. The reporting capability within **Bynx MI** has been supplemented to enable greater data insight.

A new INSPECTION app allows customers to remotely create different types of vehicle and asset inspection reports and bring the details directly into **Bynx** where it can be made available throughout.

The app, which is currently only available to customers who use the **Bynx** platform, is a convenient tool for capturing data, such as handover reports, safety checks and return inspections.

However, **Bynx** users will find it familiar as it extends the capability of the company’s Web Inspection App and supports offline data capture when WiFi or comms networks are unavailable. In this case, reports are collected and saved into a ‘Inspections Pending List’ for later download.

The **Bynx** INSPECTION app is currently available for Android on Google Play.

About Bynx

Bynx solution modules deliver global software standards for the Mobility sector including vehicle leasing & finance, fleet management as a service, short term daily rental, passenger transportation services and mobility as a service (also known as *MaaS* or *TaaS*).

Bynx originated 30 years ago and now manages over one million assets globally. **Bynx** enables organizations to control and manage the complete life cycle of vehicles and engage with stakeholders online.

Based on open architecture and Oracle technology the solution is scalable to suit any size operation, can be quickly and easily implemented, and integrated with wider corporate management solutions.

Bynx is available on a multi-market, multi-currency and multi-language basis. Customer branded web portals can be easily created to add value for clients, dealers and brokers. **Bynx** also provides project management and managed infrastructure, outsourcing, training and broader fleet consultancy.
