

A composite background image. On the left, there are vertical bar charts with data points and connecting lines. On the right, a male athlete in a red tank top and black shorts is captured in mid-stride, running on a track. The overall lighting is dramatic, with blue and orange tones.

## Bynx 12.13 Released

Advanced database performance, added support for commercial fleets, enriched maintenance management and more.....

**Wednesday 21st October, 2020:** Global provider of vehicle fleet, leasing and mobility management platform **Bynx** today announced the release of its latest software version **Bynx 12.13**. The release includes important technology stack changes and an update to the Oracle 19c database, which enhances data optimisation and diagnostics so users achieve better operational, analytical and workload performance.

Additionally, **Bynx 12.13** builds on the foundations laid in previous releases to deliver amplified functionality and user experience in several key areas including: commercial fleets, fleet maintenance and reporting capability.

There's additional support for HGV and other commercial fleets to help control costs. Commercial customers running fleets of LCVs - vans, taxis, buses or trucks, for example, can benefit from enhancements to maintenance management within **Bynx**. Commercial vehicles often come with ancillary products fitted from different suppliers. Managing these accessories and associated supplier contracts is critical in terms of controlling fleet costs and adhering to regulatory compliance. **Bynx 12.13** offers increased functionality, more streamlined job processing and control of authorisation processes.

New maintenance functionality within **Bynx 12.13** includes the ability to take into consideration all maintenance and service patterns for combined vehicle and ancillary assets and build these into your product and service quotations, e.g. full service operating lease, or fleet management as a service (FMaaS) TCO commitments. This can be done at a model-type level and all necessary data flows through the system and informs how a vehicle and its ancillaries will be managed during its contracted life.

**Bynx 12.13** also includes improved reporting capability, specifically in terms of delivering the data insight required to optimise RVs (Residual Values), which is crucial for maintaining fleet profitability.

Recognising the aim of many fleets to introduce new and more environmentally-friendly powertrains into the mix, **Bynx** has long supported the management of EVs (electric vehicles). This has been strengthened with the increase of model data (available from manufacturers) and reporting capability. It provides fleet managers with a rich database of information, which can be analysed and turned into valuable insight that will help manage the fleet mix optimally and in line with both business and environmental goals.

A horizontal collage of four images. From left to right: 1. A white van parked in a lot. 2. A person in a white shirt standing in front of a large, glowing blue and white data visualization or network diagram. 3. A close-up of a car's headlight and grille. 4. A hand holding a smartphone, with a blurred background of a car wheel and motion blur.

## About Bynx

**Bynx** is a vehicle fleet, leasing and mobility management platform. Its solution modules deliver global software standards for the mobility sector, including vehicle leasing & finance, Fleet Management-as-a-Service (FMaaS), short-term rental, passenger transport services and Mobility-as-a-Service (MaaS) or Transport-as-a-Service (TaaS).

**Bynx** originated over 30 years ago and now manages upwards of one million vehicle assets globally. **Bynx** enables organisations to control and manage the complete lifecycle of their vehicle assets, engage with stakeholders online, and deliver products and services to all user types across multiple devices.

Based on open architecture and Oracle technology, the solution is scalable to suit any size operation, can be quickly and easily implemented and integrated with wider corporate management solutions.

**Bynx** is available on a multi-market, multi-currency and multi-language basis. Customer branded web portals can be created to add value for clients, dealers and brokers.

**Bynx** (the company) also provides project management and managed infrastructure, outsourcing, training and broader fleet consultancy.
